DEDICATED RESOURCES FOR DEMANDING WEBSITES WITH OUR VIRTUAL SERVERS FOR WINDOWS®

At IBSPoint we provide the most reliable web hosting services available. Through global industry leaders in providing world-class hosting and SaaS solutions to small, medium and enterprise businesses. So whether it's a website, e-commerce, Web 2.0 application, or a complex clustered server solution, our hosting services deliver robust performance and reliability that you can count on to support all of your hosting needs.

AWARD-WINNING SOLUTIONS FOR WINDOWS

We offer a simple, scalable path that allows you to grow your site from a shared hosting account to a virtual or dedicated Web hosting server. Plans include:

» **NET Framework** — Web designers can use Microsoft Web tools to build Websites, and ASP.NET Developers can create dynamic Websites, .NET applications, and XML Web services.

» **MultiSite Pro Subhosting** — IBSPoint MultiSite Pro technology delivers control over subhosted Websites. Sites can be hosted in independent AppPools, or grouped together to share account resources.

» **Resource Virtualization** — Through virtualized RAM and CPU, IBSPoint guarantees server performance for all Windows-based hosting accounts. For IBSPoint Managed Web Servers for Windows, server resources (CPU and RAM) are divided into Virtual Resource Units (VRUs) that can be allocated to a site or site group.

» **Email Server Capability** — Email server functionality is included for all domains, parked or hosted.

» **Marketing Tools** — Valuable tools are included with each hosting plan to assist you with Search Engine placement, banner ads, and online marketing management.

» **MS SQL 2005** — Selected accounts based on Windows come standard with an MS SQL 2005 database. Available disk space varies by plan type.

» **MySQL** — MySQL is the world's most popular open source database.

» **URL Rewrite** — ISAPI_Rewrite 3 is an Apache .htaccess mod_rewrite for Windows. It is used for search engine optimization, to proxy another server's content, to stop hotlinking, and to strengthen site security.

» **PHP Starter Kits (Labs)** — This includes applications like WordPress, Joomla, MediaWiki, PHPEventCalendar, and Geeklog.

» **ShopSite Shopping Cart** — IBSPoint Web Servers for Windows come pre-installed with a ShopSite Starter shopping cart, opt-in email marketing functions, and the ability to commerce-enable existing Websites.

» **EasySite Plus** — IBSPoint Web Servers for Windows have access to our EasySite Plus design tool. With over 200 Web templates, blogging capability, a news ticker, unlimited photo galleries, and maps and driving directions, EasySite Plus is a simple way to build a robust Website without having any previous design experience.

» **Hosting Labs for Windows** — IBSPoint has a unique environment for advanced developers that contains some of the latest and greatest hosting innovations, many of which were created by our award-winning development team.

» **Multiple Development Language Support** — IBSPoint supports many different programming languages on its platform including all of the languages supported in the .NET framework, ASP.NET, PHP, CGI, Perl, and JavaScript.
